

## Tutorial 03

### MCQ No. 6

In the above **Figure B**, the first data byte  $(F7)_h$  is divided by the generator polynomial  $X^4 + X^3 + X + 1$  which is  $(11011)_2$  as an example. After the division, the remainder is  $(1101)_2$  which will be appended at the next data byte  $(38)_h$  for further division to obtain the CRC.
