2017/2018 SEMESTER ONE EXAMINATION

Diploma in Electrical and Electronic Engineering (DEEE) 2nd Year Full-Time (DEEE) Diploma in Energy Systems and Management (DESM) 2nd Year Full-Time (DESM)

<u>ELECTRICAL INSTALLATION DESIGN</u> <u>Time Allowed</u>: 2 hours

Instructions to Candidates:

- 1. The examination rules set out on the last page of the answer booklet are to be complied with.
- 2. This paper consists of TWO sections:

Section A: 6 Short Questions, 10 marks each. Section B: 2 Long Questions, 20 marks each.

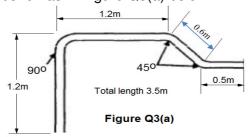

- **ALL** questions are **COMPULSORY**. 3.
- 4. All questions are to be answered in the answer booklet. Start each question in Section A and Section B on a new page.
- 5. This examination paper consists of 4 pages, with another 6 pages of Extracts from CP5 Tables making a total of 10 pages.

/17/18 S1 Page 1 of 10

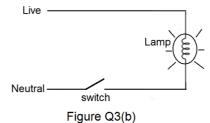

SECTION A: [10 Marks Each]

- 1(a) A shopping centre needs 2350kVA of electricity. State the voltage, frequency and number of wires that Singapore supply authority will provide. What type of earthing system will be used? Determine the maximum current and power that can be drawn from Singapore Power at 2350kVA and power factor of 0.86 lagging. (8 marks)
- 1(b) Draw the diagram of a single-phase electrical installation adopting the TT earthing system, clearly labelled all the parts. (2 marks)
- 2 Temporary Electrical Installations for Construction and building sites requires the use of Socket Outlet Assembly (SOA). (10 marks)
 - (i) State any three other areas where SOA is also applicable.
 - (ii) State the requirements relating to the enclosure of the assembly and type of protective devices used for the SOA.
 - (iii) State the colours used for 230 volts and 400 volts industrial plugs.
 - (iv) State the Inspection frequency required of Temporary Electrical Installations at other places besides Construction Worksite.
- 3(a) Determine a suitable conduit size for the installation of the following circuits. (Using the cable factor method.) (8 marks)
 - 3 numbers of single-phase circuit using 1.5 mm² single core PVC-insulated stranded cables with 1.5mm² single core PVC insulated cables for the protective conductors
 - 1 number of three-phase 3-wire circuit using 2.5 mm² single core PVC-insulated stranded cables with 1.5mm² single core PVC insulated cables for the protective conductors.

The conduit shall be run as in Figure Q3(a) below:

3(b) During the inspection of an electrical installation, the circuit Figure Q3(b) below was identified. What is the fault in this circuit? (2 marks)

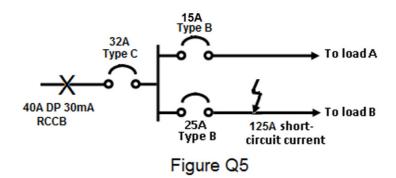

Explain the difference between relays and contactors used in control circuits. Design the control and power circuit of a three phase induction motor with direct-on-line starter (no indicating lights needed). (10 marks)

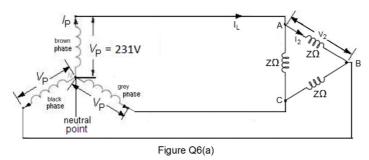

/17/18 S1 Page 2 of 10

- 5 Refer to the single line diagram in Figure Q5 below:
 - (i) Determine the corresponding tripping time for the 32A Type C MCB and the 15A Type B MCB when an overload current of 60A flows in Load A and briefly explain whether discrimination is achieved. (4 marks)
 - (ii) Determine the corresponding disconnection times for the 25A Type B MCB and the 32A Type C MCB when the circuit for Load B is shorted to neutral in load B with a short circuit current of 125A. Explain clearly whether discrimination is achieved between the 32A Type C MCB and the 25A Type B MCB. (4 marks)
 - (iii) If the 125A short-circuit current in (ii) is shorted to earth instead of to neutral, state the device that will operate first. (2 marks)

(Only Type B MCB Time/current characteristic graph is provided)

6(a) In the circuit below, three identical impedances Z (each 100 ohms) are connected in delta to a 400V/231V three phase supply. Determine V_2 , I_2 and I_L . Recalculate V_2 and I_2 when the black phase is disconnected to the impedance at point B. (5 marks)

6(b) An electrical installation with many circuits was divided into three sections for the Insulation Resistance Test. The values obtained are $4~M\Omega$, $4~M\Omega$ and $2~M\Omega$. What is the equivalent insulation resistance value for the installation, and is it acceptable? (5 marks)

/17/18 S1 Page 3 of 10

SECTION B: [20 Marks Each]

- B1 A 4-bedroom residential unit is supplied by three-phase 400V/230V 50 Hz supply. It has the following electrical loads:
 - 12 nos. 2 x 32W fluorescent lamps
 - 8 nos. of 50W tungsten halogen down lights
 - 65 nos. 13A switched socket outlet connected in **4 radial circuits**, each protected by a 20A MCB (Estimated demand of each circuit is 3000W)
 - 4 nos. instantaneous water heaters, each rated 3 kW
 - 7.5kW cooker controlled by cooker control unit with 13A switched socket outlet
 - A MULTI SPLIT air-conditioning unit where the electrical load can be considered to be a three-phase motor, rated 7.0 kW with an efficiency of 90% and a power factor of 0.85.

Using the diversity factor given in Table 4B, draw a load list table as per sample below. (1 mark)

| Description | Connected Load | D.F. | Current Demand |
|-------------|----------------|------|-----------------------|
| | | | |

Hence calculate:

- (i) the **three phase** maximum demand
- (ii) the suitable size of the main circuit breaker, assuming 10% spare capacity is allowed for future expansion

(Standard circuit breaker rating: 30A, 40A, 50A, 63A, 80A, 100A). (19 marks)

- B2(a) A motor is rated 9 kW, 400V, 3-phase, power factor 0.8 lagging, efficiency 90%. The length of the cable is 30m from the distribution board and it is to be wired in **3-core** PVC insulated copper cables sharing a trunking with two other similar circuits. The ambient temperature is 35°C. Determine:
 - (i) the design current, hence the nominal rating of the MCB and Type (Standard circuit breaker rating: 15A, 20A, 25A, 30A, 40A, 50A, 63A)
 - (ii) a suitable size of 3-core PVC cable
 - (iii) the actual voltage drop and check whether the cable size selected can meet the CP5 requirement. Re-select cable size if necessary.

(12 marks)

- B2(b) A single-phase 230V, cooker control unit (with 13A socket outlet incorporated) is wired in single-core 4.0mm² PVC insulated copper conductor and 2.5mm² PVC insulated copper conductor for circuit protective conductor. The circuit is protected by a 32A Type C MCB, the circuit length is 10 meters long. The value of Z_E is given as 0.55 Ω .
 - (i) Determine if the given size of circuit protective conductor (CPC) meets the requirement for shock protection, resize the CPC if necessary. (4 marks
 - (ii) Calculate the actual earth fault loop impedance for the size of CPC selected and determine the earth fault current. Hence check whether the CPC selected can withstand the earth fault current. (Given k =115.) (4 marks)

Table 17A
Values of resistance/metre for copper and aluminium conductors and of (R1 + R2)/metre at 20°C in milliohms/metre

| | onal area (mm²) | | etre or (R ₁ + R ₂ |
|-----------|-----------------|--------------|--|
| 0.000 000 | mar aroa (mm) | | etre |
| Phase | Protective | Plain copper | Aluminium |
| conductor | conductor | (mΩ/m) | |
| 1 | - | 18.10 | |
| 1 | 1 | 36.20 | |
| 1.5 | - | 12.10 | |
| 1.5 | 1 | 30.20 | |
| 1.5 | 1.5 | 24.20 | |
| 2.5 | - | 7.41 | |
| 2.5 | 1 | 25.51 | |
| 2.5 | 1.5 | 19.51 | |
| 2.5 | 2.5 | 14.82 | |
| 4 | - | 4.61 | |
| 4 | 1.5 | 16.71 | |
| 4 | 2.5 | 12.02 | |
| 4 | 4 | 9.22 | |
| 6 | - | 3.08 | |
| 6 | 2.5 | 10.49 | |
| 6 | 4 | 7.69 | |
| 6 | 6 | 6.16 | |
| 10 | - | 1.83 | |
| 10 | 4 | 6.44 | |
| 10 | 6 | 4.91 | |
| 10 | 10 | 3.66 | |
| 16 | - | 1.15 | 1.91 |
| 16 | 6 | 4.23 | _ |
| 16 | 10 | 2.98 | _ |
| 16 | 16 | 2.30 | 3.82 |
| 25 | - | 0.727 | 1.2 |
| 25 | 10 | 2.557 | _ |
| 25 | 16 | 1.877 | _ |
| 25 | 25 | 1.454 | 2.4 |
| 35 | - | 0.524 | 0.868 |
| 35 | 16 | 1.674 | 2.778 |
| 35 | 25 | 1.251 | 2.068 |
| 35 | 35 | 1.048 | 1.736 |

Table 17B - Multipliers to be applied to Table 17A

| Insulation Material | p.v.c. | 85º C Rubber | 90 ⁰ C Thermosetting |
|---------------------|--------|--------------|---------------------------------|
| Multiplier | 1.38 | 1.53 | 1.60 |
| | (1.30) | (1.42) | (1.48) |

Note: The values in brackets are applicable to the resistance of circuit protective Conductors where Table 54B applies.

The multipliers given in Table 17B are based on the simplified formula given in BS 6360 for both copper and aluminium conductors namely that the resistance temperature coefficient is 0.004 per °C at 20°C.

| (h) Type C BS 387 | | ıre circui | t-breake | rs to SS | 359 and | I Type 3 | miniatu | re circui | it-break | ers to | |
| Rating (amperes) | 6 | 10 | 16 | 20 | 32 | 40 | 50 |) (| 63 | 100 | I _n |
| Z _s (ohms) | 3.83 | 2.30 | 1.44 | 1.15 | 0.72 | 2 0.5 | 7 0. | 46 (| 0.36 | 0.23 | 23/I _n |
| | miniatu | re circuit | -breaker | s to SS | 359 | | | | | | |
| Rating | 6 | 10 | 16 | 20 | 32 | 40 | 50 |) (| 63 | 100 | I _n |
| (amperes) | | | | | | | | | | | |

NOTE: The circuit loop impedances given in the table should not be exceeded when the conductors are at their normal operating temperature. If the conductors are at a different temperature when tested, the reading should be adjusted accordingly.
